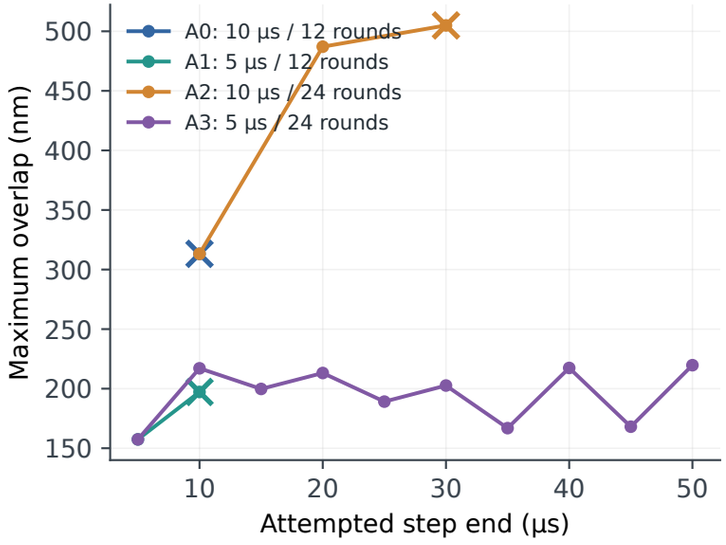
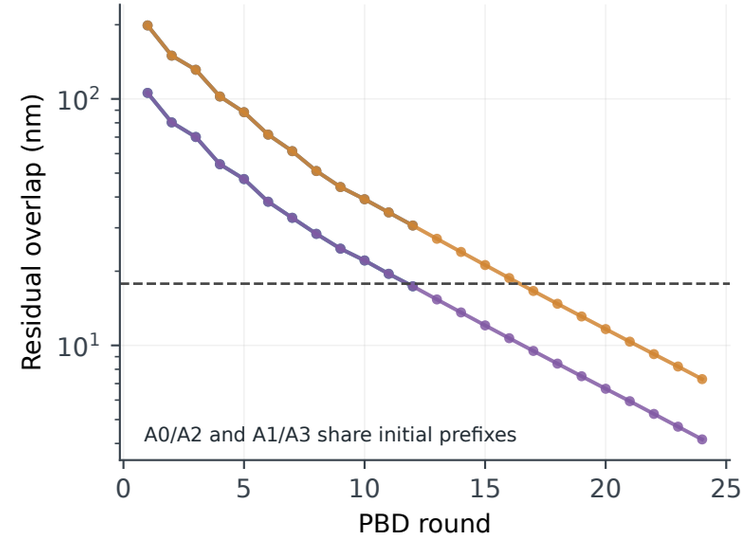
3 kPa contact diagnosis: time step and contact iterations

Original force / wall models and 17.8 nm residual / 178 nm correction limits retained

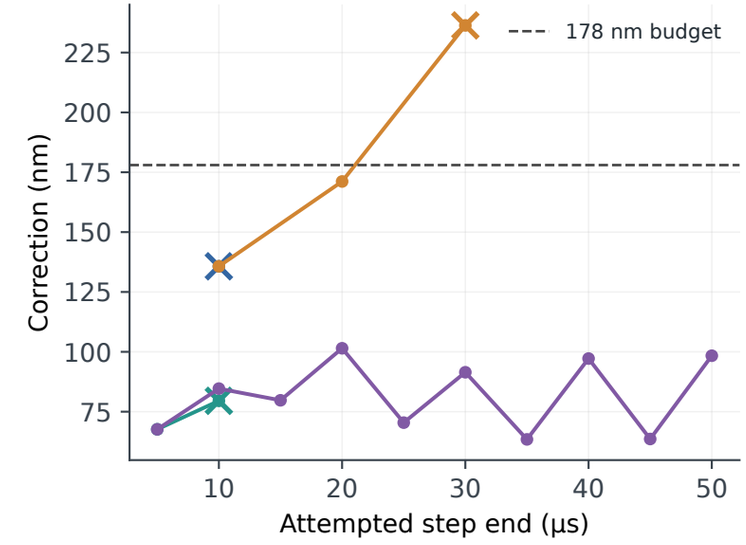
a Predicted overlap (before PBD)



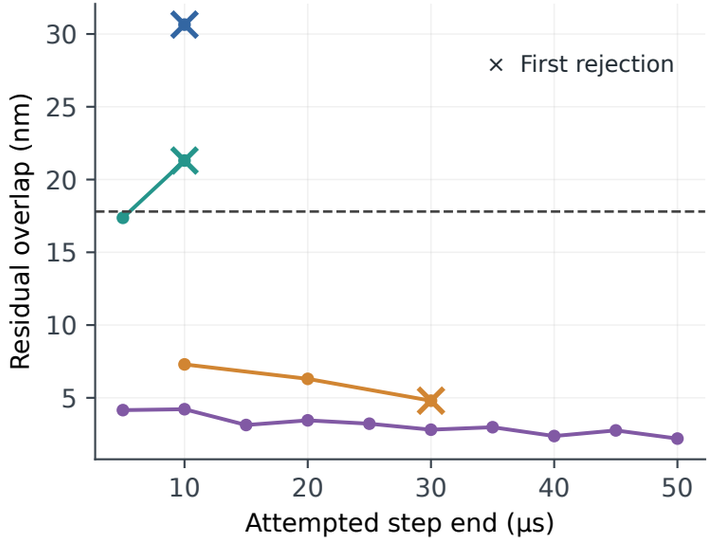
b First step: convergence per round



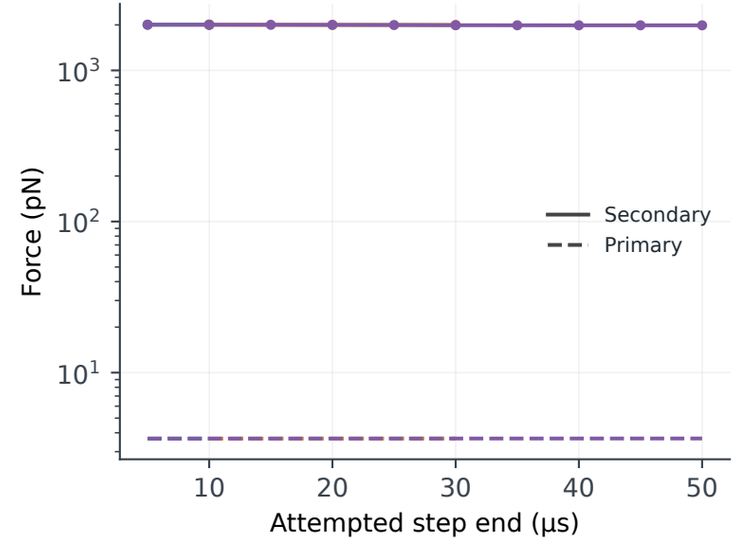
c Largest single-round correction



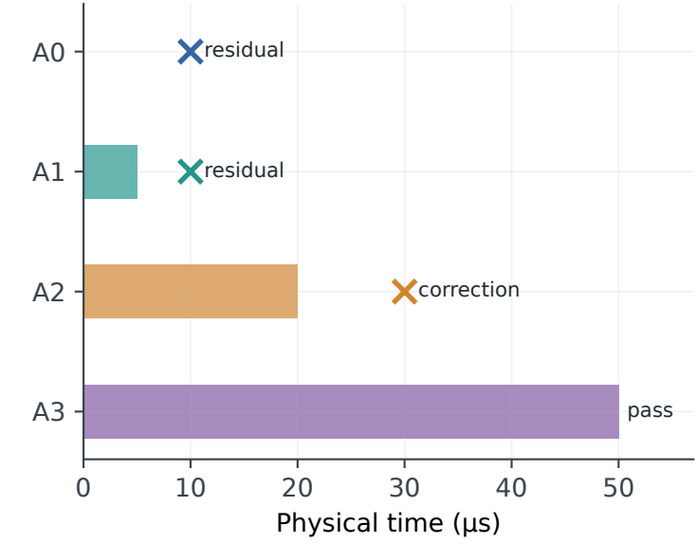
d Residual after all PBD rounds



e Actual per-bubble RMS force



f Accepted prefix and first rejection



M0 engineering model; physics uncalibrated; no morphology prediction. Data: F10A / F10B | plot a03623802
