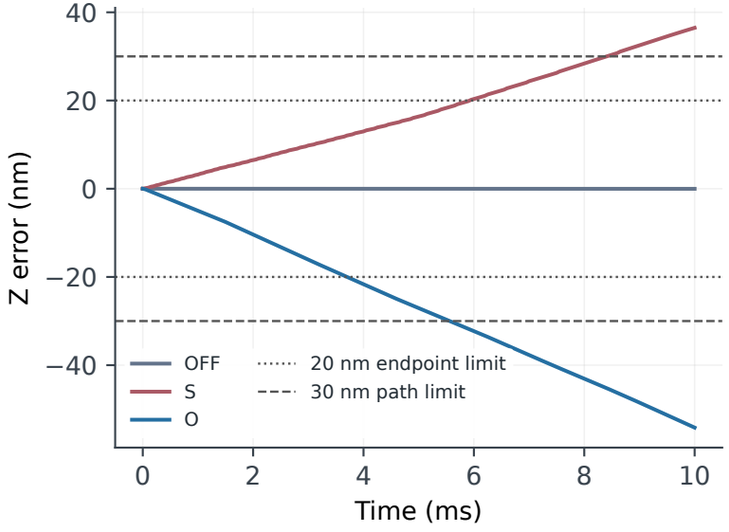
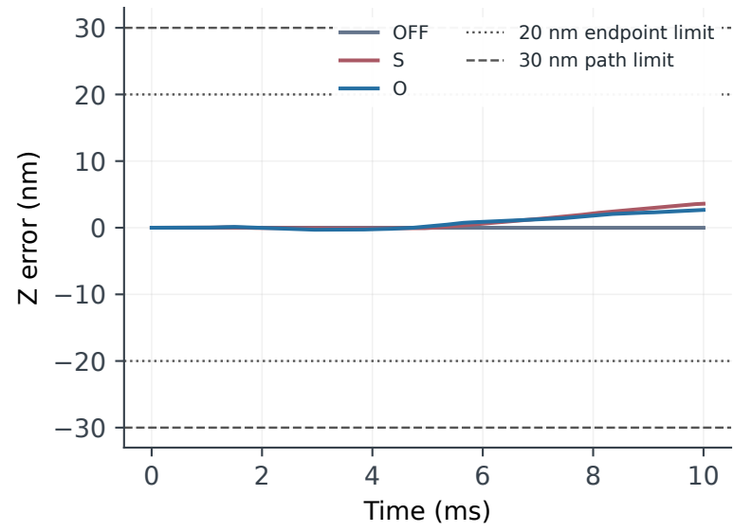
Accuracy passes for G1; standalone preparation limits acceleration

One timing sample per control / mode; same RTX 4090; all input preparation and comparable centroid output included

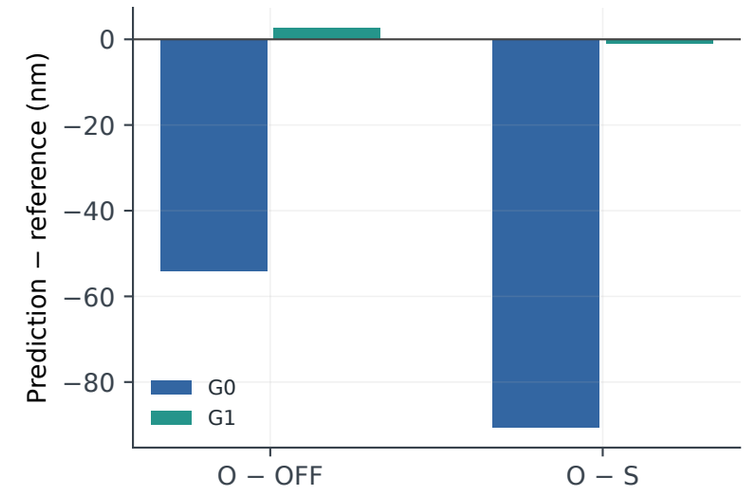
a G0: signed Z prediction error



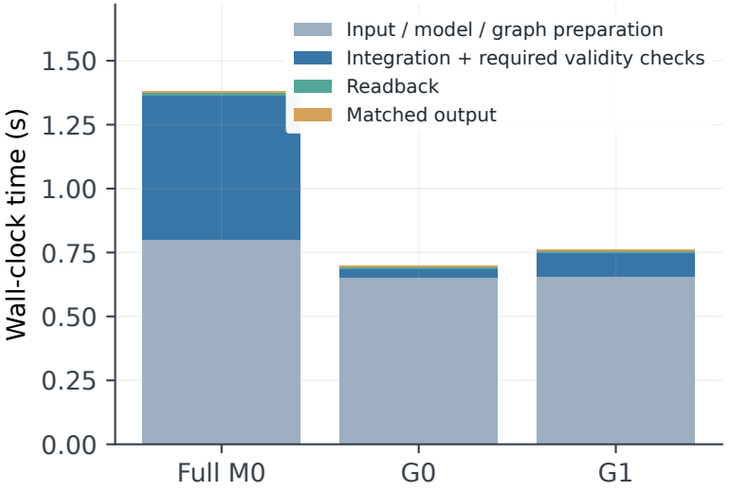
b G1: signed Z prediction error



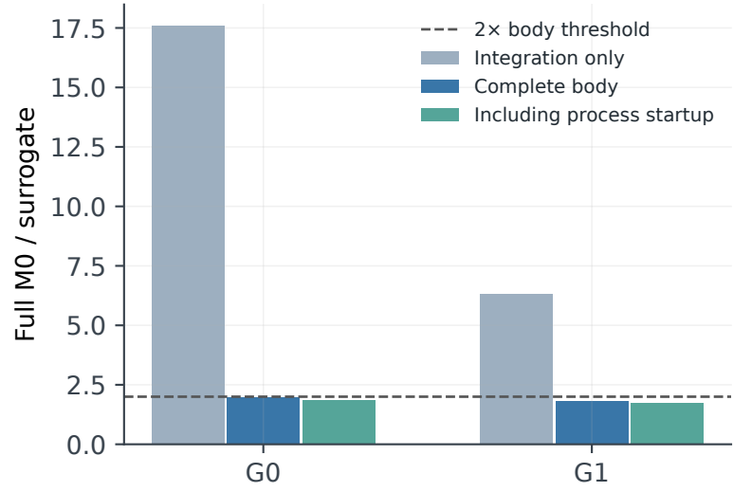
c Endpoint paired-increment error



d Standalone program body (O control)



e Measured speedup (same O control)



f Separate evidence gates

Model	Accuracy	Body speed	≥2× + accuracy
G0	FAIL	1.98×	FAIL
G1	PASS	1.82×	FAIL

G1 maximum Z error: 3.60 nm
G1 largest endpoint 3D error: 3.88 nm

No empirical gain fitted.
No additional batch campaign.
