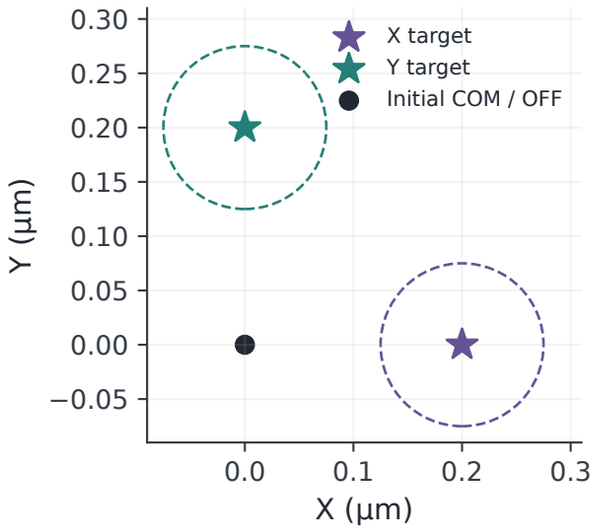
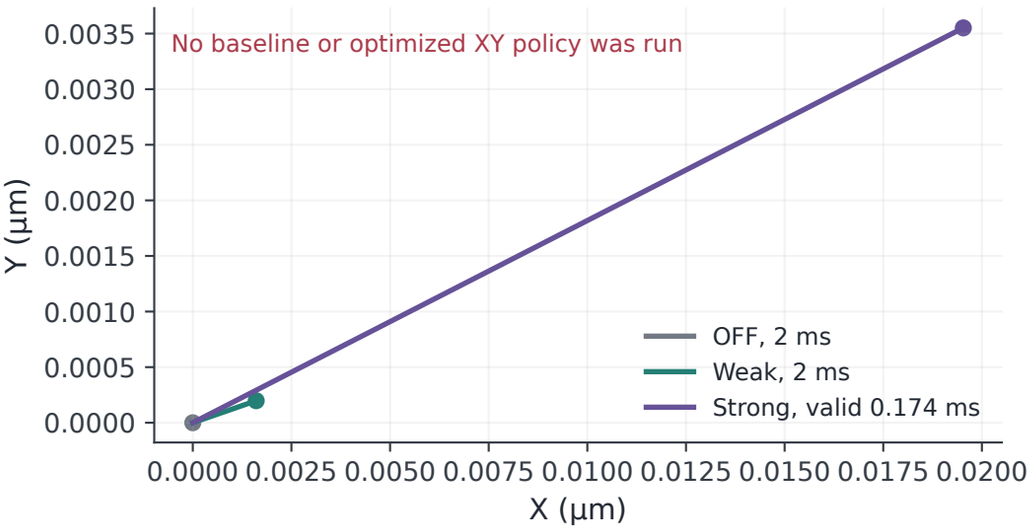
F10O | Preregistered XY task stopped at the numerical gate

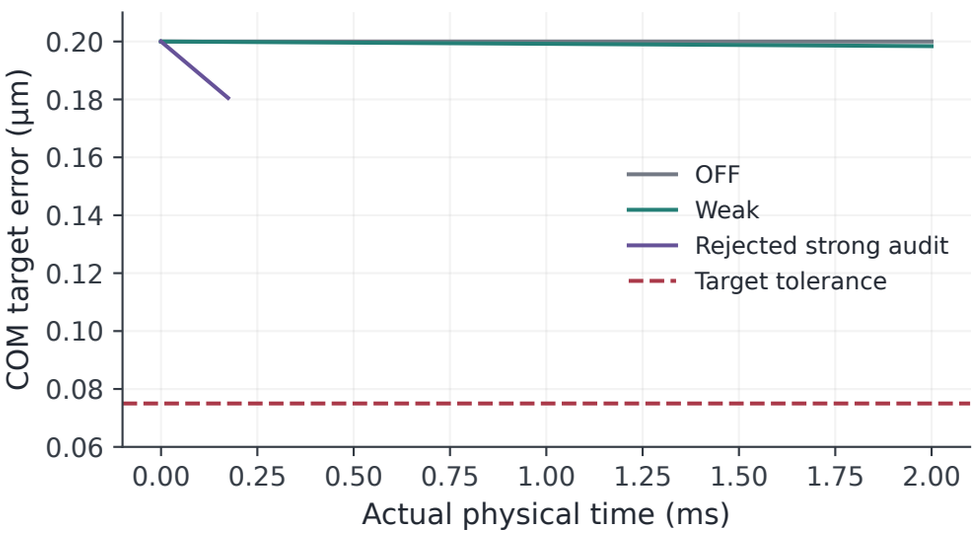
a XY targets locked before any new trajectory



b Observed COM: numerical controls only



c Actual distance to registered X target



d Navigation and extension admission

OFF numerical control: completed 2 ms
BASELINE XY policy: NOT_RUN
OPTIMIZED X / Y policies: NOT_RUN

Strong B2 failed the unchanged overlap budget.
No independent X/Y navigation has been demonstrated.

5 ms: NOT_RUN 10 ms: NOT_RUN 30 ms: NOT_RUN
No extrapolated trajectories are shown.

Near-zero Z COM is specific to this symmetric state;
it is not a theorem of global Z uncontrollability.
