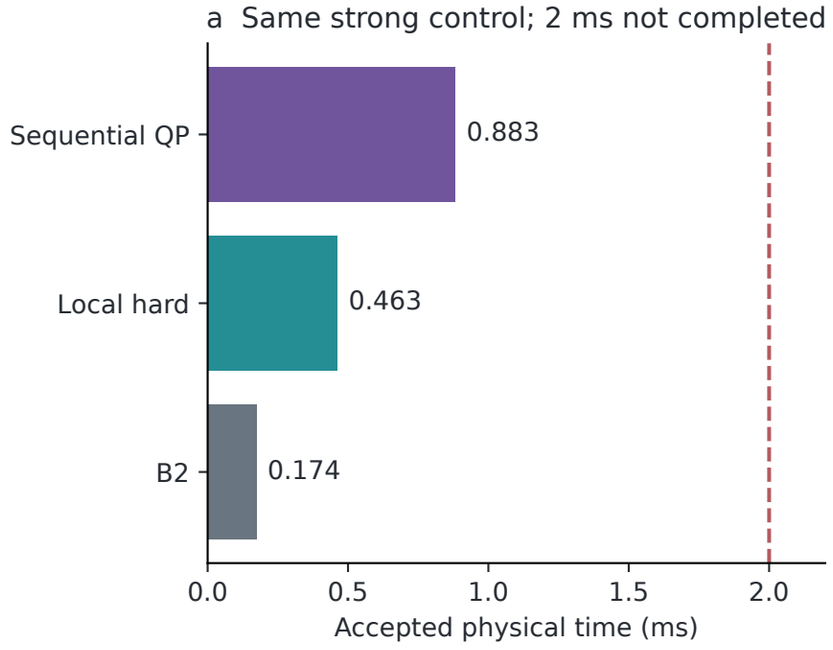
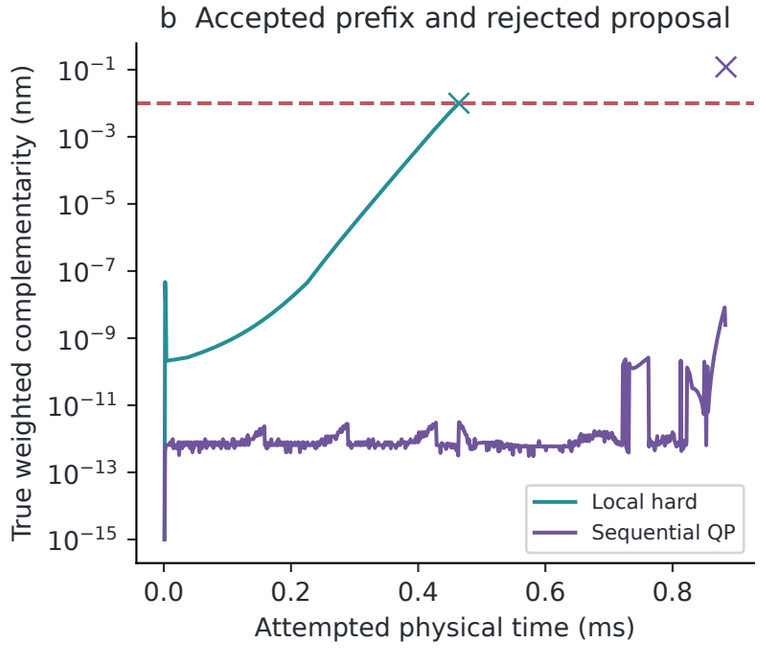
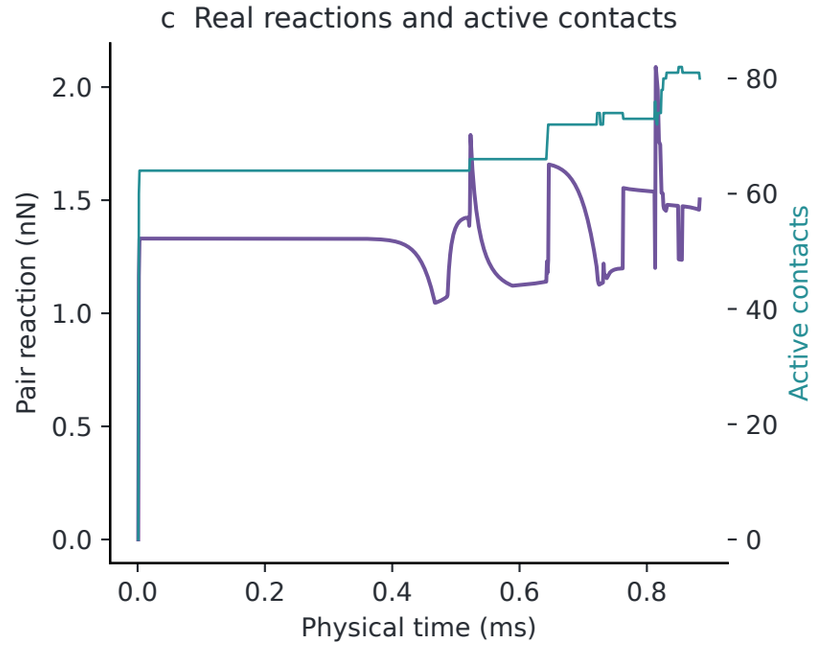
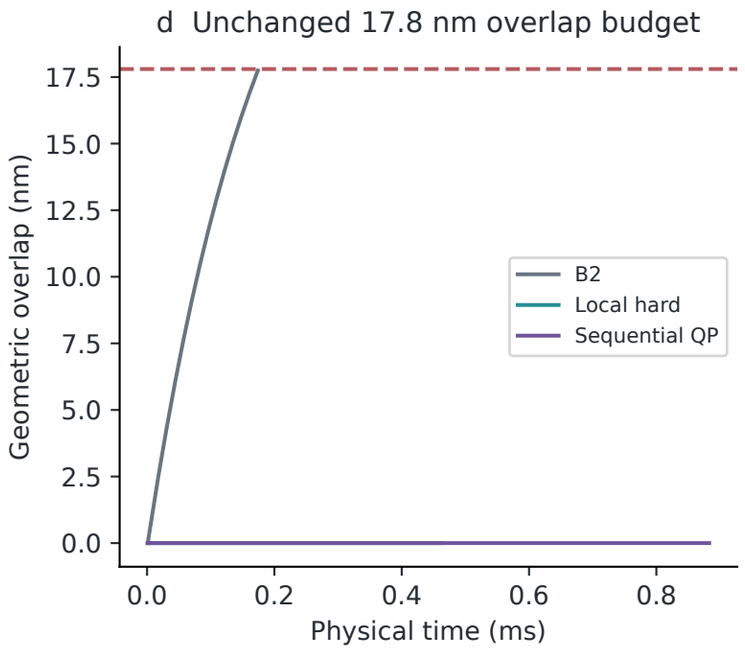
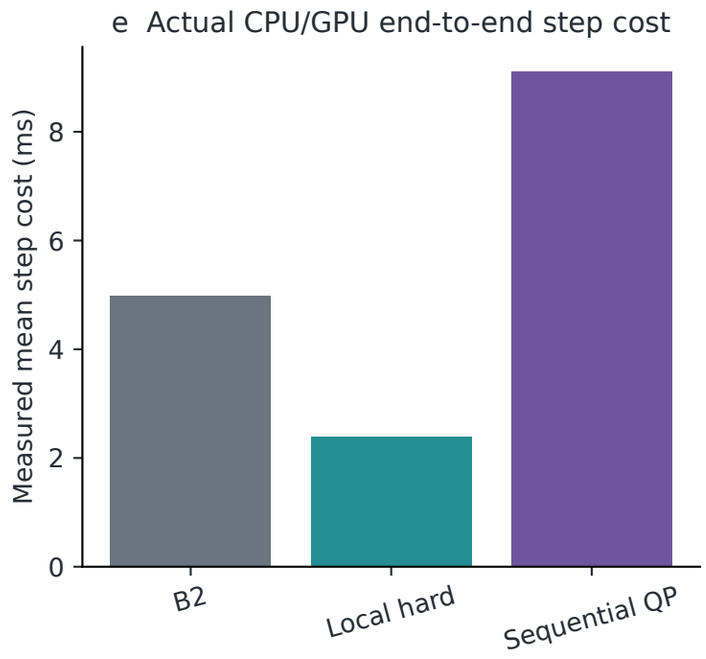
F10Q | Strong-control contact admission and stopping evidence











f Limits and rejected states

Sequential QP: 1–5 local solves per step
Strong rejection: active-set cycle at 0.884 ms
No trajectory point beyond 0.883 ms accepted.

New strong dt = 0.5 µs: NOT_RUN
Reason: full dt = 1 µs run failed.
Old local hard dt = 0.5 µs: 0.5 ms prefix only.

Same-model navigation dt/cache checks: Fig. 4
B2 complementarity: NOT_APPLICABLE
No spring or PBD after the hard QP.

EXPLORATORY · No tolerance relaxation. Historical B2/local hard data retained; sequential trajectory starts from the original initial state.
EXPLORATORY · HOMOGENEOUS_WATER_CONTROL_PROXY · PHYSICS_UNCALIBRATED · training_ready=false
