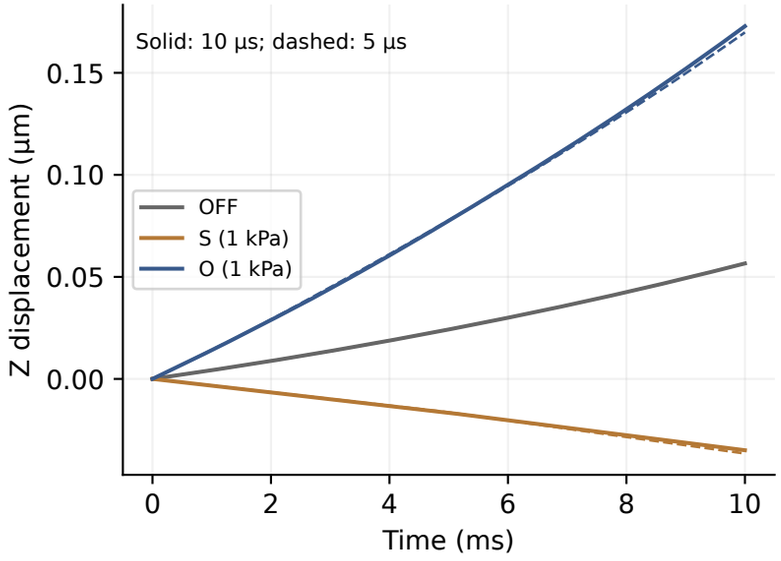
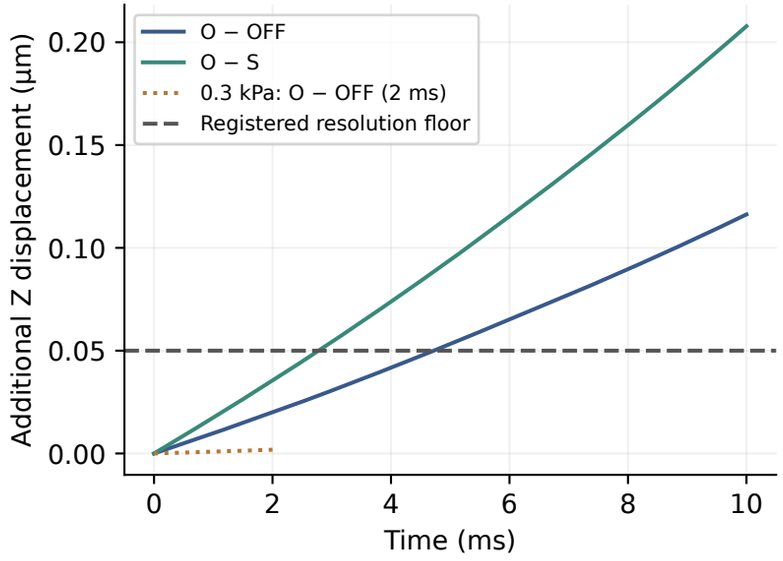
F10A | Resolved group drift with substantial internal contact

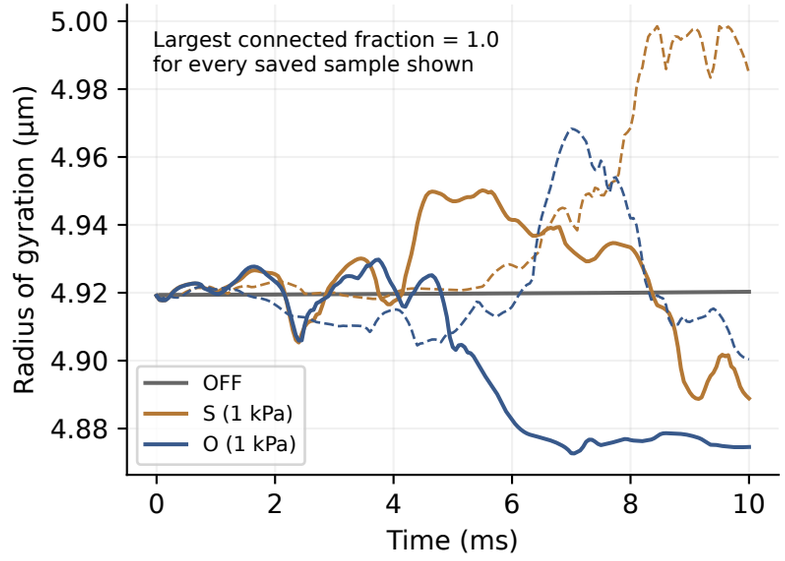
a Actual fixed-ID centroid



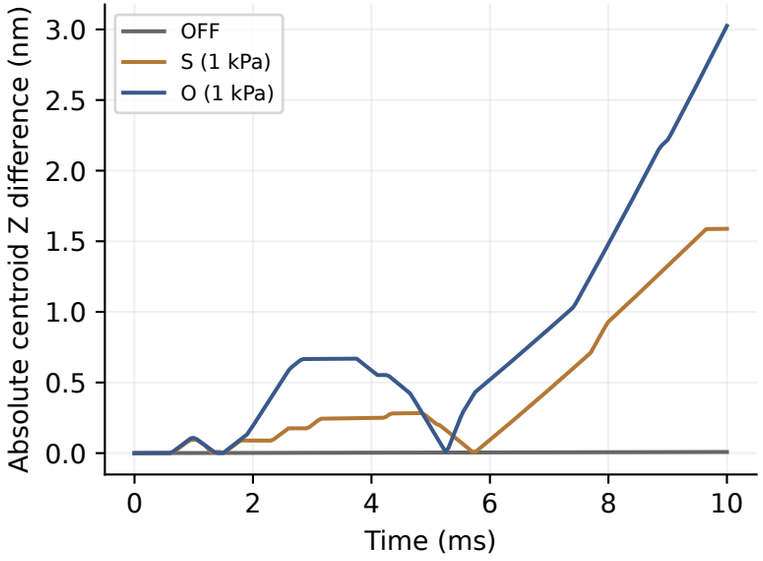
b Paired acoustic increments



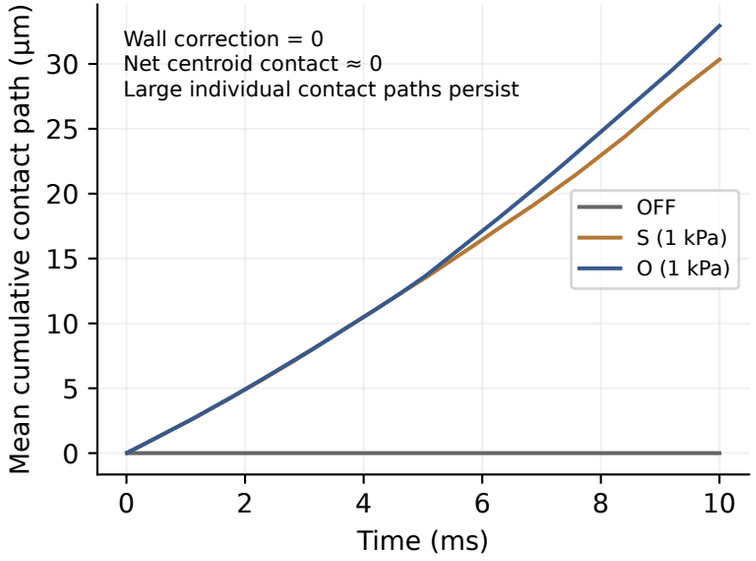
c Shape and connectivity



d New 10 / 5 µs sensitivity



e Unsigned individual PBD path



f Quality and interpretation

1 kPa paired increment: +0.113 µm

O step sensitivity: 3.03 nm

1 kPa: all six 10 ms runs PASS

3 kPa: S and O FAIL in first 50 µs

Reason: residual overlap >0.01 R

No accepted 3 kPa trajectory fabricated

Individual step difference: 4.18 µm
