# F10C | Real full-particle morphology, common scale and fixed IDs

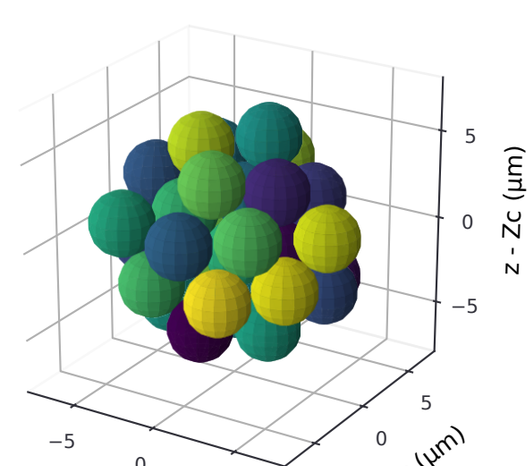

**Serial M0 reference**
**t = 0 ms | Rg 4.919 um | aspect 1.113**
**Largest component: 32/32**

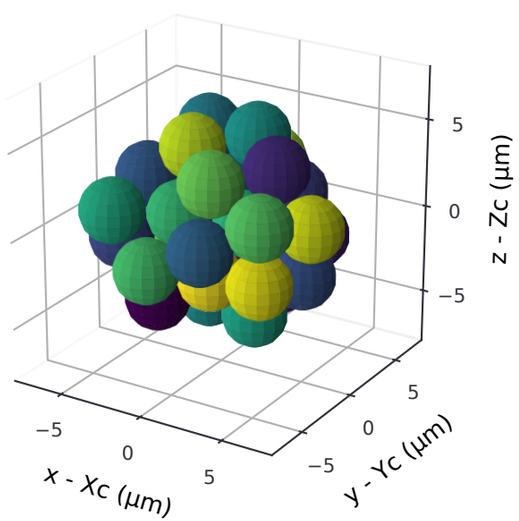

**GPU batch B = 64, member 0**
**t = 0 ms | Rg 4.919 um | aspect 1.113**
**Largest component: 32/32**

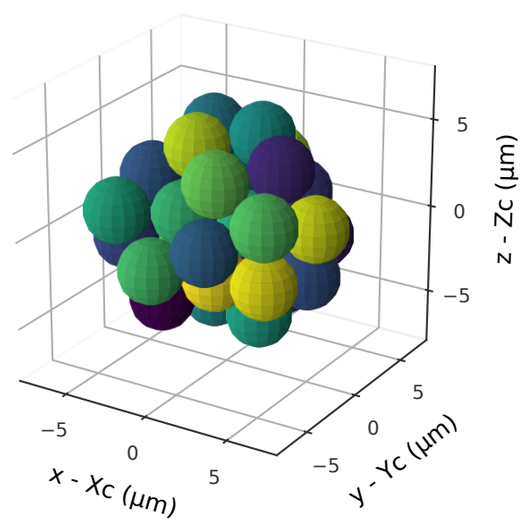

**Q1 acoustic cache (NOT ADMITTED)**
**t = 0 ms | Rg 4.919 um | aspect 1.113**
**Largest component: 32/32**

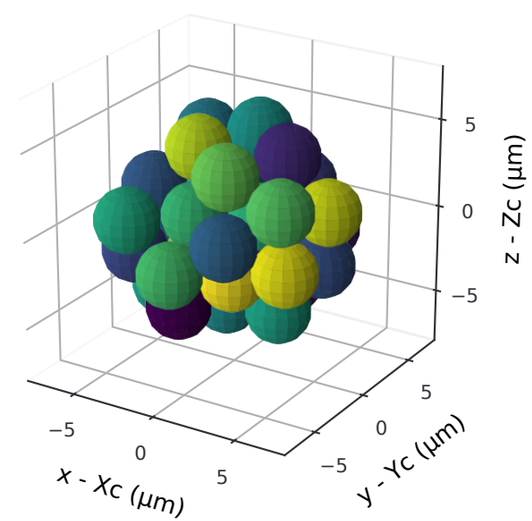

**Serial M0 reference**
**t = 10 ms | Rg 4.875 um | aspect 1.184**
**Largest component: 32/32**

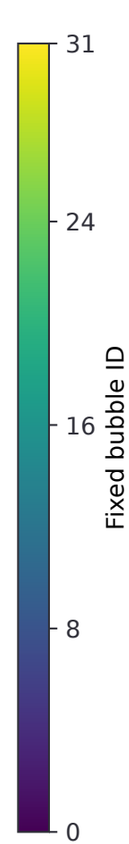

**GPU batch B = 64, member 0**
**t = 10 ms | Rg 4.875 um | aspect 1.184**
**Largest component: 32/32**

**Q1 acoustic cache (NOT ADMITTED)**
**t = 10 ms | Rg 4.876 um | aspect 1.184**
**Largest component: 32/32**

Original radius R = 1.78 um; each frame is centered on its actual centroid (no shape rescaling). Serial and batch positions are bitwise identical.
All 32 particles remain connected; no component split or merge was observed. Q1 changes individual arrangements despite a small centroid error.
