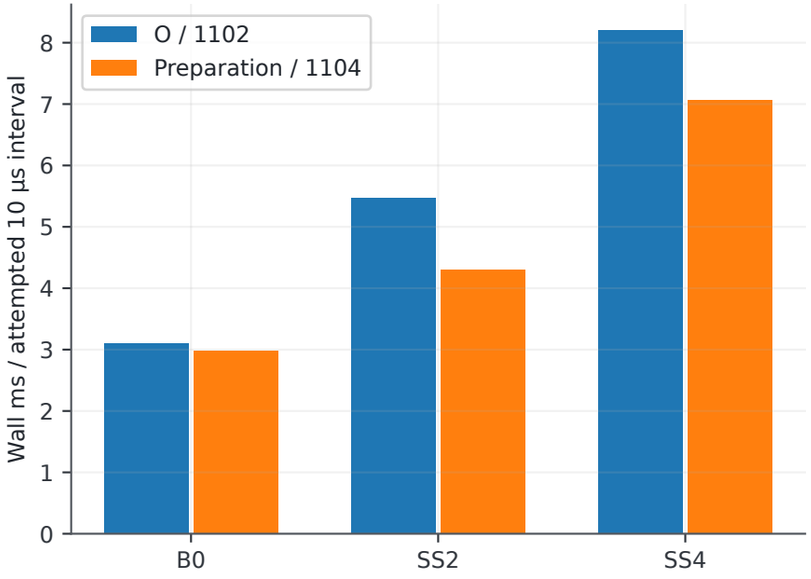
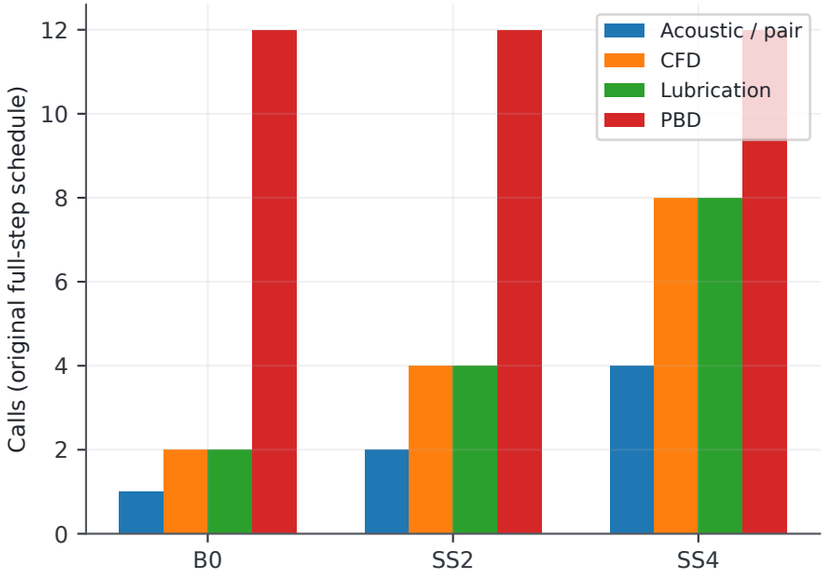
F10F | Equal PBD rounds do not imply equal total cost

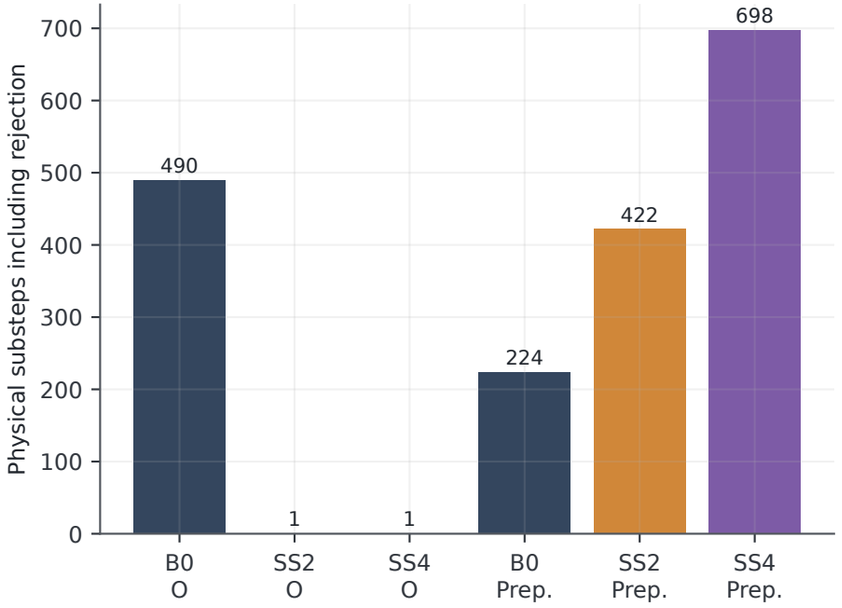
a Diagnostic integration cost



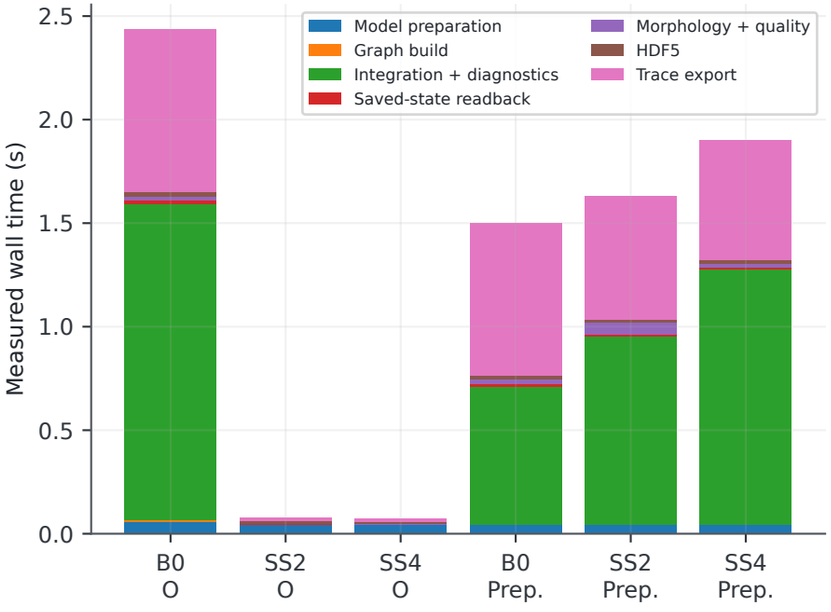
b Fresh work per 10 µs interval



c Actual attempted physics work



d All scientific replay costs



e Effective full-duration yield

SS attempts passing original failure windows: 0 / 4

New complete 10 ms control trajectories: 0
New OFF / S / O triplets: 0
Reused independent seed families: 2

All cold processes: 12.825 s
Includes engineering checks and failed attempts

New complete trajectories / reserved GPU hour: 0
Cost per new qualified sample: undefined (zero yield)

f Performance admission

Formal production benchmark: NOT ADMITTED

All Small Steps candidates failed contact gate.
Diagnostic CPU readbacks are included in a,d.
CUDA span includes host gaps; not pure kernel time.

Historical C1 (5 µs / 12 rounds):
1 O / 1102 trajectory completed 10 ms;
no matched SS full-duration timing is available.

No SS12, full-duration SS or batch expansion.
No demonstrated production speedup.

All timing bars are diagnostic runs with different stopping times; they are not a matched production speed comparison. GPU-hour denotes exclusive card reservation.
