Scientific scope: one interior persistent merge, incomplete topology validation

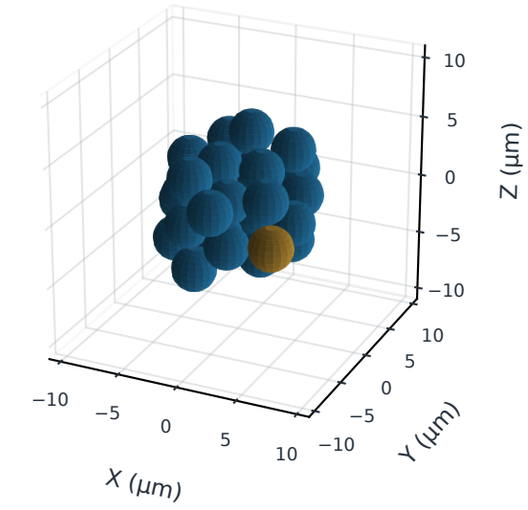

a Evidence, not physical truth

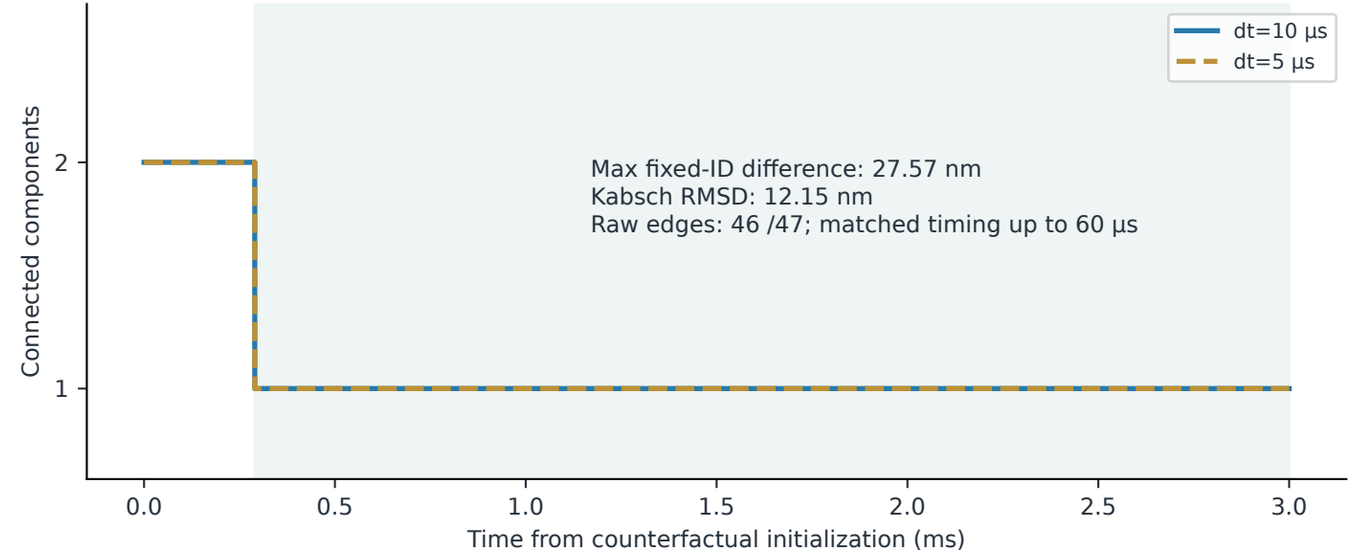

b B2 initial: 31 +1

c B2 at 3 ms: 32 connected

d Same merge at 0.290 ms; persists for 2.710 ms

Same B2, stiffness and controls; dt 10/5 μs, original 17.8/178 nm quality budgets. True-radius spheres in centroid-relative coordinates.
A graph merge is not physical bubble fusion. Persistent splitting remains untested; old 12/29 edge-timing FAIL retained; training_ready=false.
