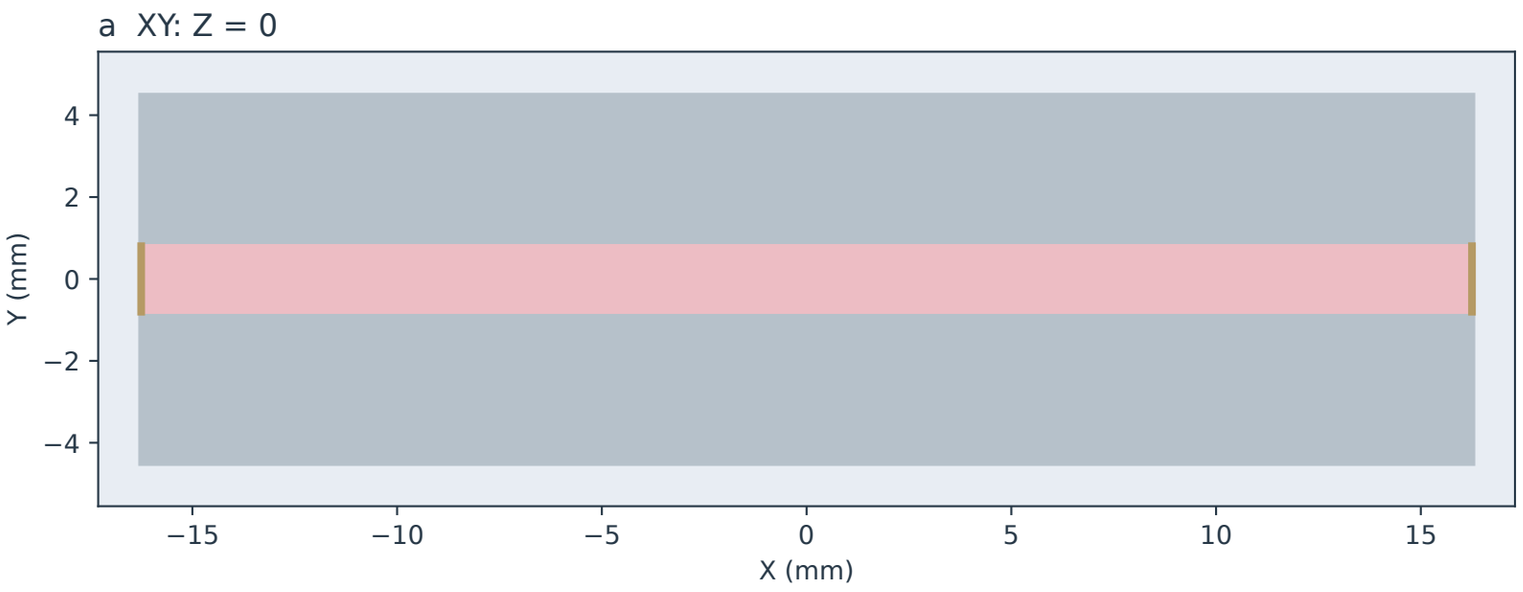
F10M-R3 | Material regions and acoustic admission



Four apparatus fields: NOT RUN

Top fill / exterior medium: UNKNOWN

End seals / acoustic transfer: UNKNOWN

Drive frequency / pressure calibration: UNKNOWN

Incomplete maps intentionally contain NaN

Solver input rejection: PASS

No four-field reuse from old three-source data

Geometry grid: 100 µm, for material bookkeeping only. Port colors label VOID regions, not an assumed water fill.
Mechanical closure does not specify seal material or acoustic reflection. Zero active flow does not model streaming, menisci or residual injection flow.
