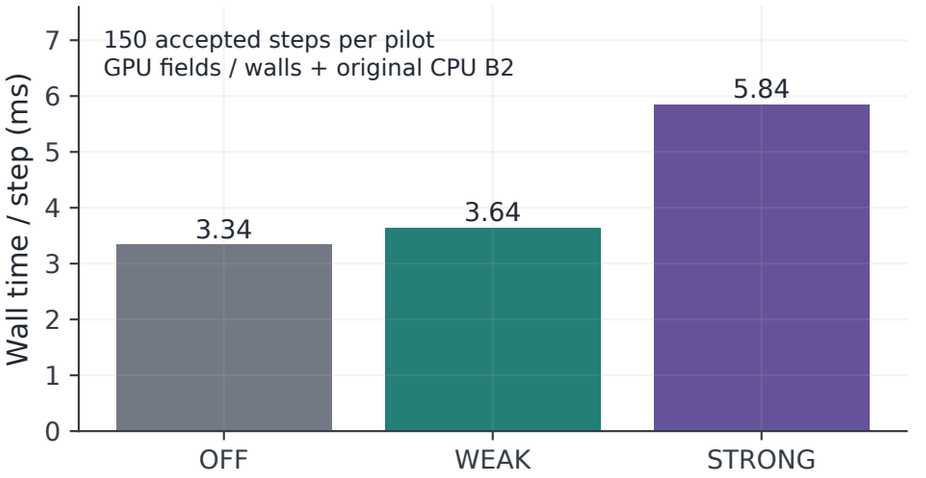
F10O | Bounded computation and explicit admission decisions

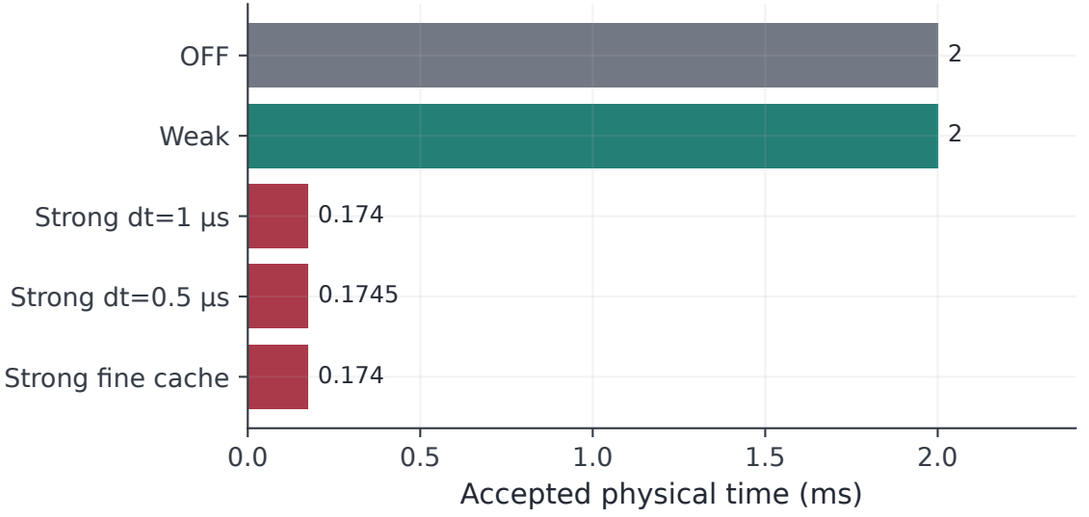
a Admission levels remain separate

Dead-code cleanup	PASS
B2 engineering bridge	PASS
B2 mathematical residual	PASS
Strong 2 ms overlap quality	FAIL
Strong 2 ms fixed-ID admission	NOT ADMITTED
Weak 2 ms fixed-ID sensitivity	PASS
New XY target navigation	NOT_RUN
Experimental calibration	NOT CALIBRATED
AI training admission	training_ready=false

b Measured end-to-end step cost



c Actual physical time completed



d Cost, stopping evidence and scientific scope

Numerical processes: 72.91 s
Integration and step evidence: 71.92 s
CPU B2 solver calls: 50.54 s; resistance: 10.89 s
Peak process RSS: 529.0 MiB

12 runs: 9 complete short windows; 3 strong overlap rejections.
Deleted one unused Warp helper (5 lines); history preserved.
No new contact solver, stiffness change or relaxed threshold.

Uniform-water acoustics, near-field and contact laws remain uncalibrated. Graph connectivity is not physical fusion.
Times exclude deployment, imports, plotting and documentation.
GPU kernel time was not profiled separately.
