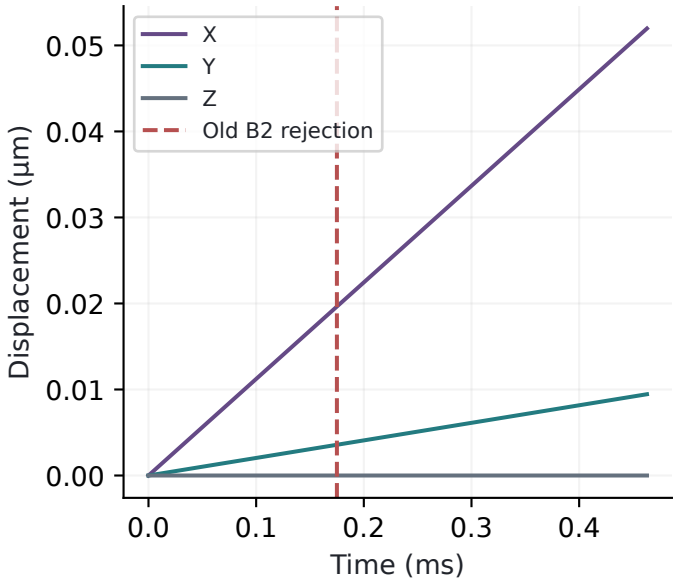
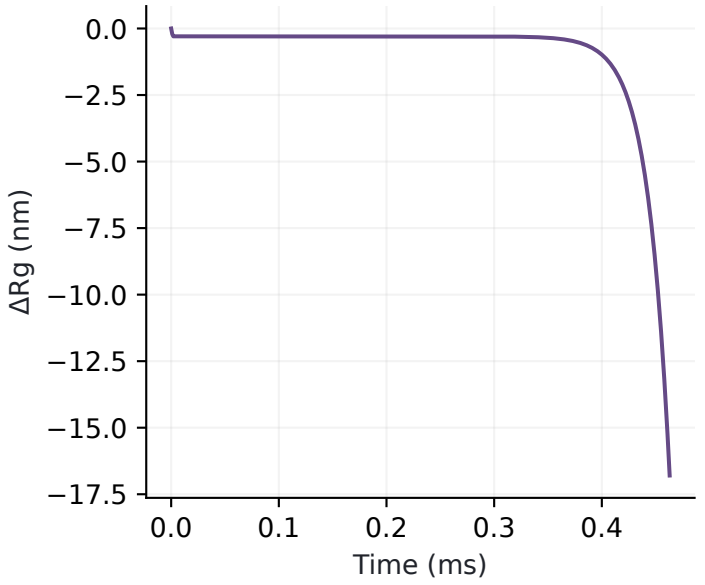
Strong control: actual legal prefixes and numerical sensitivity

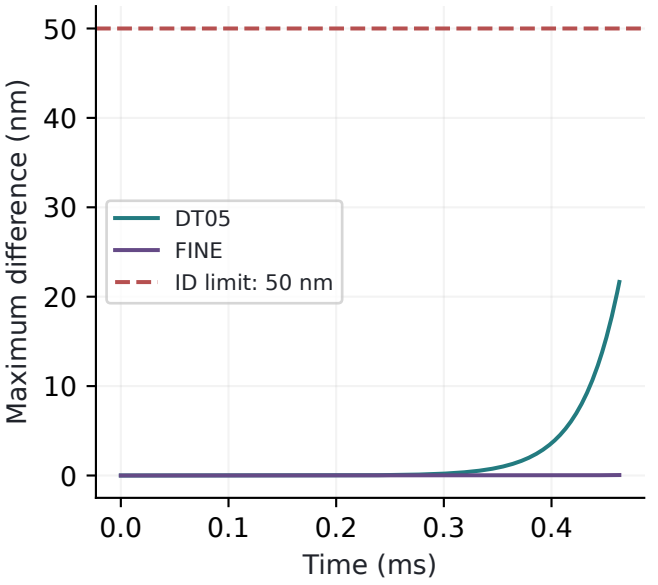
a Center of the original 32 IDs



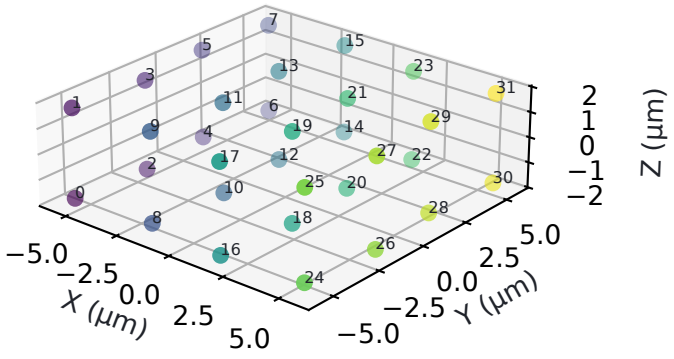
b Centered radius of gyration



c Same-ID difference, common legal time



d Actual particle centers and IDs



e Separate quality decisions

Requested: 2.000 ms
Legal prefix: 0.463 ms
Rejected proposal: 0.464 ms

Local QP equations: PASS
Sphere nonpenetration: PASS
True-gap complementarity: FAIL
Measured: 0.01006 nm
Registered limit: 0.01000 nm

No full 2 ms strong admission

f Actually covered time
