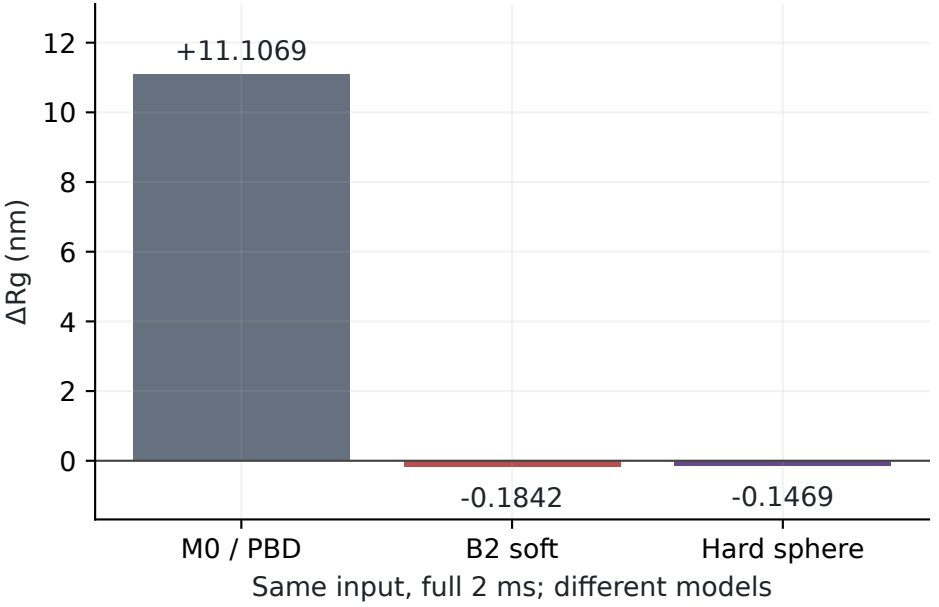
Group and particle admission are independent scientific statements

a No admission can be inferred from another column

	Basic	Group position	Group shape	2 ms network	Particle ID	Calibration
STRONG	FAIL	NOT_RUN	NOT_RUN	NOT_RUN	NOT_RUN	NOT_VERIFIED
OFF	PASS	PASS	PASS	PASS	PASS	NOT_VERIFIED
WEAK	PASS	PASS	PASS	PASS	PASS	NOT_VERIFIED

b Weak-control shape is contact-model dependent



c Scope and measured differences

Weak control: full 2 ms numerical comparison

COM difference: 7.92e-07 / 4.68e-05 nm
ID difference: 1.03e-05 / 0.000179 nm
Rg difference: 5.87e-08 / 1.29e-06 nm
Normalized Q: 1.83e-09 / 3.8e-08
(values: step / cache)

One initial network survives 2 ms.
No new persistent merger or physical fusion.
No observed group-pass / ID-fail hard-sphere case.
training_ready = false
