Rise-end stage comparison · actual original-bond graph components
Reference and deformed positions · same camera and local physical width · no artificial separation

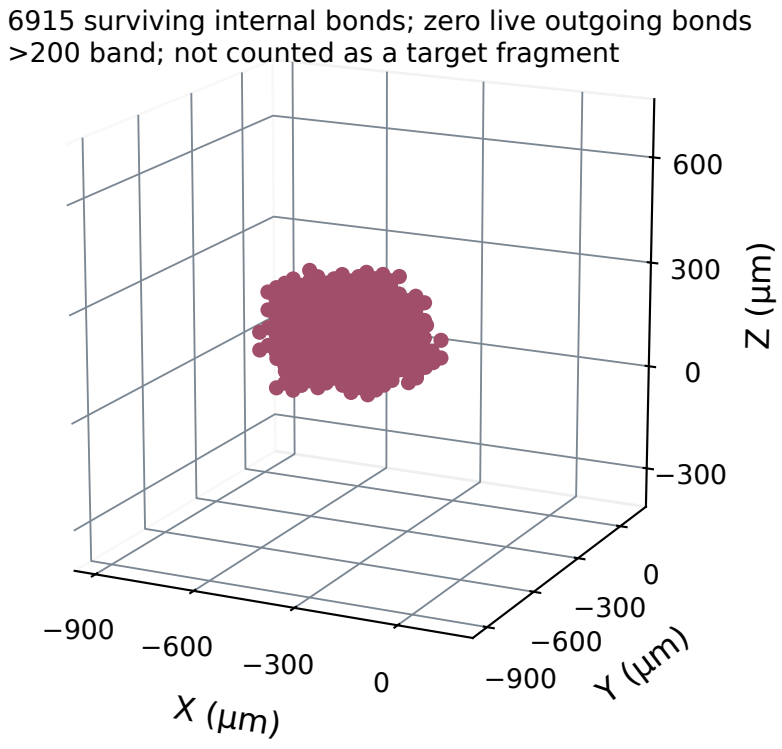

U · Uniform reference · 42 nodes
Reference positions of the same original IDs

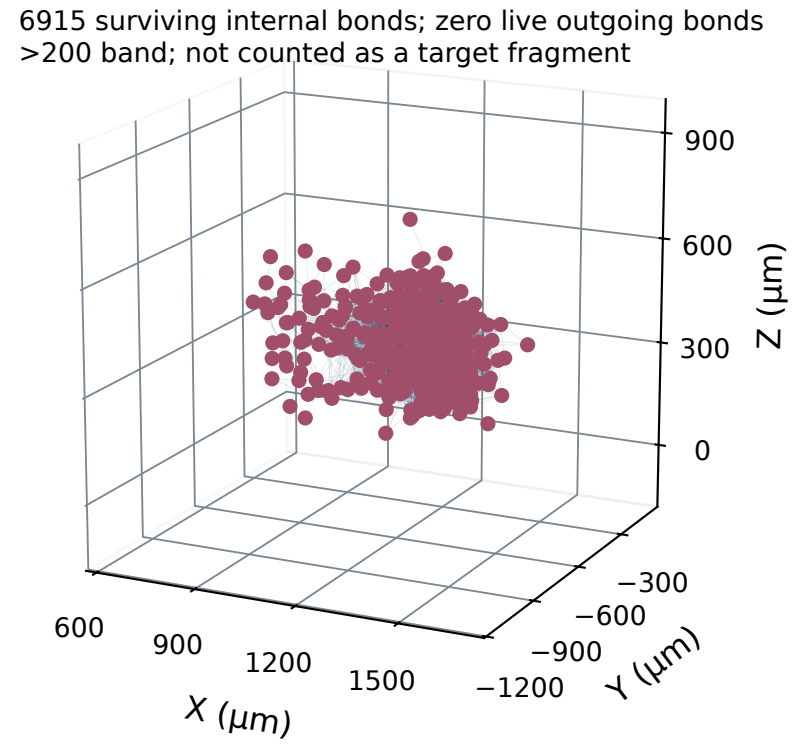

U · Uniform reference · 42 nodes
Actual accepted positions at 2.000 ms

H · Biphasic · 310 nodes
Reference positions of the same original IDs

H · Biphasic · 310 nodes
Actual accepted positions at 2.000 ms

Displayed width: 1178.2 μm in every panel. Absolute physical coordinates; displacement ×1.
Surviving edges are from the 2.0 ms accepted state in both reference and deformed views. This stage is not the final outcome.
