

Legacy conditioning and physical single-shot thinning have different semantics

Property	Legacy Method B	Legacy Method C	P9-A.4
Source size	Original full SonoVue	SonoVue $D \leq 4 \mu\text{m}$	SonoVue $D \leq 4 \mu\text{m}$
Source time	Legacy entering clock	Deterministic entering clock	Poisson source clock
Size retry	Yes, fixed anchor	If globally infeasible	Never
Position retry	No	Yes, fixed feasible size	Never
Rejected physical event	Not represented	Not represented	Retained with source_event_id
Entering rate	Legacy interpretation	$C_{\text{MB}} \times Q$ by definition	$C_{\leq 4} \times E[Q_{\text{acc}}(D)]$
Trajectory comparison	Not used	Not used	No outlet quota
