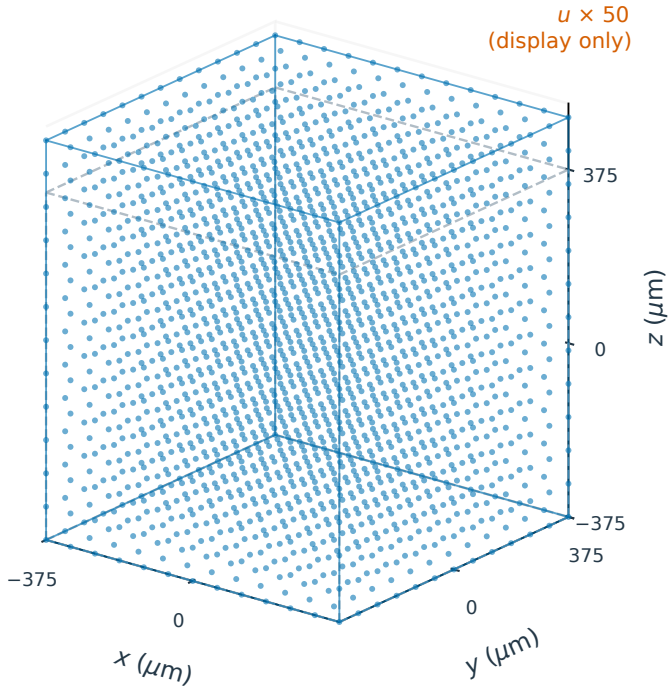
Same 3D specimen in both codes

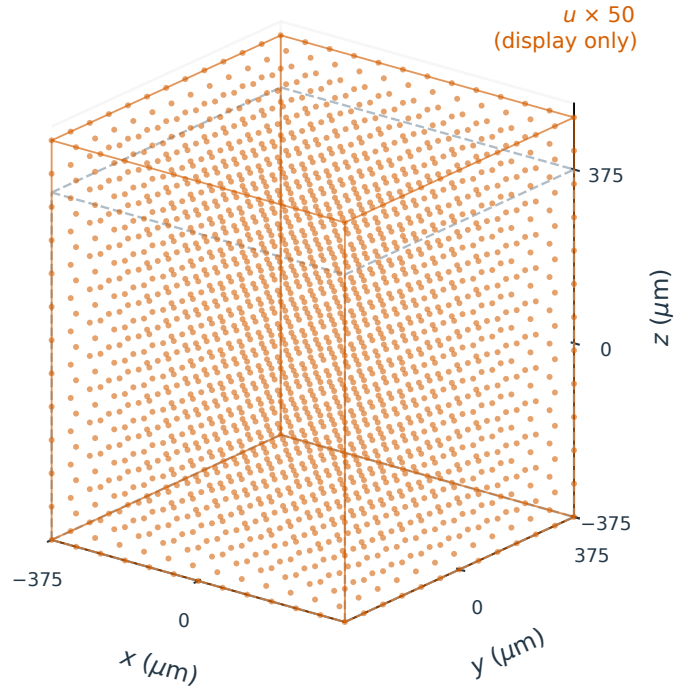
2,197 particles | Same affine state, strain 0.3% | $u \times 50$ for display

Local implementation



Python / BAQP

Author implementation



Peridynamics.jl / RKCMaterial

Input arrays match exactly: reference X, deformed x and nodal volumes.

Same horizon 251.25 μm; quadratic kernel; SVK μ = 1000 Pa, λ = 0 Pa.

Author package pinned at b6e86563845a83b5cb06c805af19a817bde6b106

Existing intact affine evaluation; no fracture evolution or time integration. Numerical coupon, not anatomical clot geometry.
