Data freshness and admission — hardware control disabled
(a) Full replay: receive-to-mock age
Accepted visual state
Rejected / no reliable target
100 ms admission limit
Decoded-frame age (ms)
Measured replay wall time (s)
(b) Injected slow consumer / outage / PTS jump
Accepted visual state
Rejected / no reliable target
100 ms admission limit
Decoded-frame age (ms)
Measured replay wall time (s)
(c) Latest-frame overwrite is reported
Decoded frames skipped (%)
34.1%
0.2%
71.7%
Broad CC + NF
Target CC + NF
Slow-consumer test
(d) CoTracker3 Online: 2 bounded emissions
Newest input frame age at output (ms)
825 ms
255 ms
First window (cold inference)
After overrun (reinitialized)
One Python latest-frame slot; all expired fault-test messages rejected. Camera-to-controller end-to-end latency: NOT_MEASURED.
