

Four stalls | Endpoint handoff rejection dominates

Dominant rejection for all four: HANDOFF_ENDPOINT_BELOW_LOWER

ID	P6.5 from birth	P9-A from birth	P6.5 from same P9-A checkpoint	Triangle switches	Max normal change (deg)	Min accepted g_nf (m)	Scaled matrix condition
7	Subdivision stop	Subdivision stop	Subdivision stop	0	0.0058	-1.65e-17	408.8 - 408.8
12	Subdivision stop	Subdivision stop	Completed	0	0.0005	-1.93e-17	302.7 - 302.7
14	Completed	Subdivision stop	Subdivision stop	0	0.0008	-8.51e-18	384.9 - 384.9
17	Subdivision stop	Subdivision stop	Subdivision stop	0	0.0020	-2.01e-17	266.6 - 266.6

Switches, normal changes and resistance condition ranges: last 100 P9-A trials. Minimum g_nf: all accepted states. Small negative g_nf values lie within the original geometric roundoff budget ($\sim 2.01\text{e-}17$ m).

ID 7 also has a separate contact-system rank issue: condition = $1.19\text{e}13$ for two constraints on the same edge.
