

Idealized H0 model | flow magnitude and ROI direction

Analysis A only: 7,419 original nodes

- 122 p_ref terminals
- ★ Idealized source 2410

Retained ROI and four real ports

Edge flow magnitude (pL/s, logarithmic scale)

Structural source 2410; all 122 other leaves at p_ref = 0. ROI inlet matched to 15.5136 pL/s.

Magenta overview corridor = ROI. Three virtual cut nodes are added for the solve. Other 42 components are excluded.
