Uniform stretch still leaves free-node forces

Archived L075 intact affine state; no additional external force on free nodes

1,859 free particles

Max |f| = 18.108 nN

Surface internal force can be balanced by a constraint reaction.

Free-node residuals are the imbalance.

Actual strain 0.3%; geometry displacement ×50. Gray squares: fixed top/bottom particles.

Black arrows: saved centerline internal forces, drawn at 8 μm per nN. Colors use actual forces.
