Admissible energy probes change from upward to downward curvature
Last stable state
Strain 0.9992187%
Energy evaluations
Hessian quadratic reference
Energy change (1e-26 J)
Mode amplitude (1e-7)
Onset: one-sided cone direction
Strain 1%
Energy change (1e-23 J)
Mode amplitude (1e-5)
Nearest interior unstable state
Strain 1.025%
Energy change (1e-22 J)
Mode amplitude (1e-5)
Left: |alpha| >= 1e-6 exits the original pure-tension domain; only smaller valid probes are plotted
Middle: negative alpha violates the phase lower bound. Right: both signs are admissible
Tiny energy differences are sensitive to float64 cancellation; dashed curves are references, not replacement data
